

Tramec Aero have been founded in 1939.

First specialized in **HF/SSB equipments** for the French Air Force as main customer, Tramec Aero developed in 1991 and 1997 **HF/SSB tubular antennas** which suitably replace SSB wire antenna. These tubular antennas are today installed on main of Eurocopter ranges of helicopters (Alouette III, Dauphin (N1 - N2 – N3 – EC155), EC120, Écureuil (AS350B2-B3 – EC130B4), Puma AS330, Super Puma AS332) and Sikorsky ranges (S61 and S92).

Our company is also **Subcontractor and Manufacturer of electrical products** which are used on Mirage and Rafale for example.

In order to diversify our activity and because of customers wanting us to be their single interlocutor for their spare parts needs, Tramec Aero created in 1994 an **International Spare Part Department**.

First, the main customer of this activity was, and still are, Dassault Aviation, Eurocopter and **Maintenance Centers** in France and in Europe.

Then, in the face of our success with these first customers, we extended the activity to Foreign **Air Forces** and **Land Forces** in Germany, Greece, Portugal, Spain, Turkey, UAE, Indonesia, China, New Zealand, Sultanate of Oman, Malaysia, Pakistan, Sri Lanka, ... and **Airlines Companies** such as TAP, ... or more recently Tunisair Technics or Sabena Technics through our subsidiary in Tunisia.

Because our own manufacturing products are more dedicated to Dassault and Eurocopter ranges of aircrafts, we decided to specialize this Spare Parts activity for these ranges, already well known by us. Then we extend it to more aircraft types : civil such as Airbus or Boeing, CRJ, ATR, Cessna, ... or military such as C130, or Russian aircrafts (Antonov, Sukhoï, ...)

Moreover, we have also 2 representative cards :

- Representative of EFJM, a french Company specialized since 1967 in the design and development of sealing systems for the aeronautical, military and pneumatic fields and which can provide **french standard Aeronautical seals** with very competitive prices and short delivery times against its competitor LE JOINT FRANCAIS, which customer are GIAT, DCNS or Safran Group, ...
- Representative of HR Smith Group of Companies, a UK Company specialized since 1966 in **Search and Rescue Equipment (ELT, PLB, ...) airborne antennas** for fixed and rotary wing platforms, dischargers, antenna test sets, ... against its competitor COBHAM/CHELTON, which customers are Aératur Zodiac, Airbus, Eurocopter, or Thales Group, ...

Our **long aeronautical experience** (since 1939), which brings special relationships with the manufacturers has been enhanced with significant data bases, effective data processing means and also with a worldwide agent network.

Because of our light and friendly structure, guarantees an instantaneous reply to the requests and also flexibility and reactivity.

Our ISO 9001-2000 certification in 2004 and then **AS/EN/JISQ new certification** (with a proud scoring of 80/100), are the warranty that the supplied parts come directly from the manufacturer factories.

All the parts are delivered to our offices, then checked with care by our **Control and Quality Department** (quality of the product, conformities of the documents, quantities, ...). They are furnished with all the **necessary OEM certificates** (Statement of Conformity, EASA Form one, FAA 8130, Log Cards, Safety Data Sheet, etc... according the product supplied).

Since the creation of this department, we are proud to notice the satisfaction, the fidelity and the confidence of our customers, as we are deeply familiar and sensitive with all the requirements of the spare parts market.
